

CONSIDERATION FOR SCHOLARSHIP

My name is Ibrahim Jafar and I have completed from T.I. Ahmadiyya Senior High School. I plan to further my education to the highest level. In High School I did Science as a course and did very well. Studying Science as a course was very interesting because it helps in broadening the mindset.

My education has not been easy because I come from a tribe (i.e. Fulani) where schooling is not regarded as anything. My family do not care about my schooling except my mother who is trying her best to make sure I go to school. I want to prove to everyone that school is important and that everyone needs to be educated.

My goal is to become an influencer who will create accessible, affordable and employable opportunities to the underprivileged communities. There are countless people from where I come from that need to know the importance of education and if I get the opportunity, I will educate people on the importance of education.

I appreciate your consideration. With your help I can continue my schooling and also educate people on the importance of education.

Thank You!
